

LIQUID GROSORB

Baileys Grosorb is an environmentally friendly, organically based, soil wetter, tailor made to overcome hydrophobic conditions common to Australian soils. It is suitable for use in commercial nurseries, all turf situations and domestic gardens.

Grosorb enables water to penetrate hydrophobic soils and assists absorption, movement and retention. It promotes plant root development by facilitating an even distribution of water to all areas of the plants container, or when applied to gardens and turf, eliminates 'run off' allowing water to soak through the soil. Grosorb also assists the effective use of fertiliser by channelling the nutrients directly into the plant root zone. This product is safe and easy to apply and comes available in both granulated and liquid form for various application needs. Cost effective, it conserves water and reduces the frequency of irrigation treatments.

Various soils types in Australia often suffer a hydrophobic (water repellent) condition, commonly referred to as 'run-off'. This condition occurs naturally, but particularly in soils which are regularly tilled and as gardens and lawns become more established. Similarly garden pots, planters and hanging baskets are affected. Laboratory testing has proven that when Grosorb is mixed with dry soil at the recommended rate, up to 28% moisture retention is attained.

BENEFITS OF LIQUID GROSORB

- Rapid uptake and quicker correction of anti wetting soils.
- Can be applied through the irrigation system reducing labour.
- Can be used in conjunction with a herbicide program.
- Even coverage.
- Allows simultaneous applications of fertiliser.
- Irrigation is not required after application at the recommended rate.

APPLICATION RATES

Liquid Grosorb should be applied at a rate of 10 – 20 litres per hectare.
For maintenance 30 – 40litres per hectare for visible signs of dry patch or in the warmer seasons.
For Fertigation apply at lower rates regularly dependant on the system flow rate, injector rate systems pass through time and the longevity that is required.

PACKAGED

Liquid: 20lt, 200lt, 1000lt

CAUTION

Nutrients can stain walkways and will need to be blown off prior to irrigation
Keep away from water sources such as ponds, pools etc.
